1500-1800 children and young people have a life-limiting illness in Catalonia

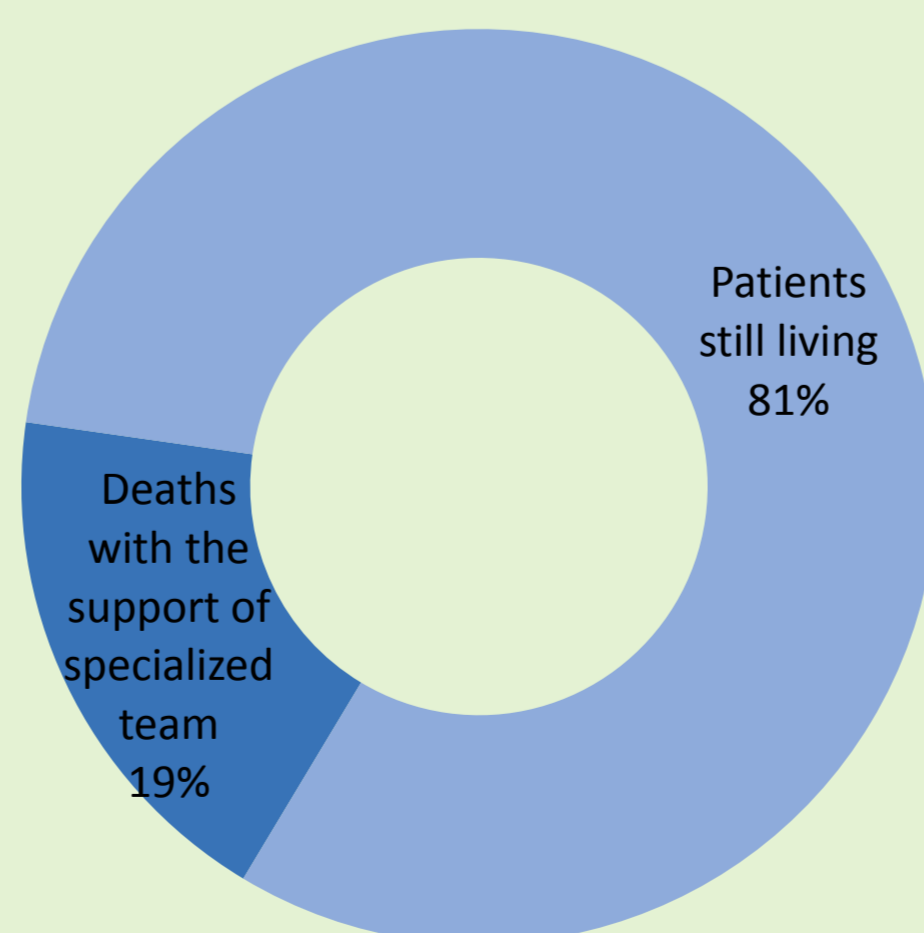

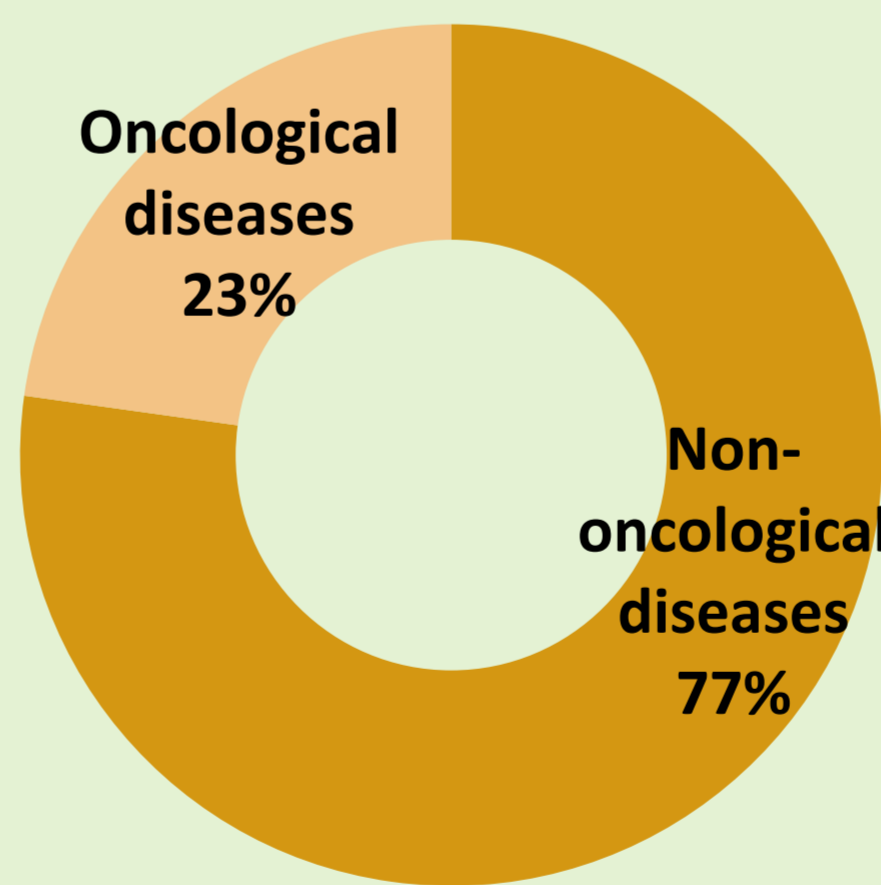

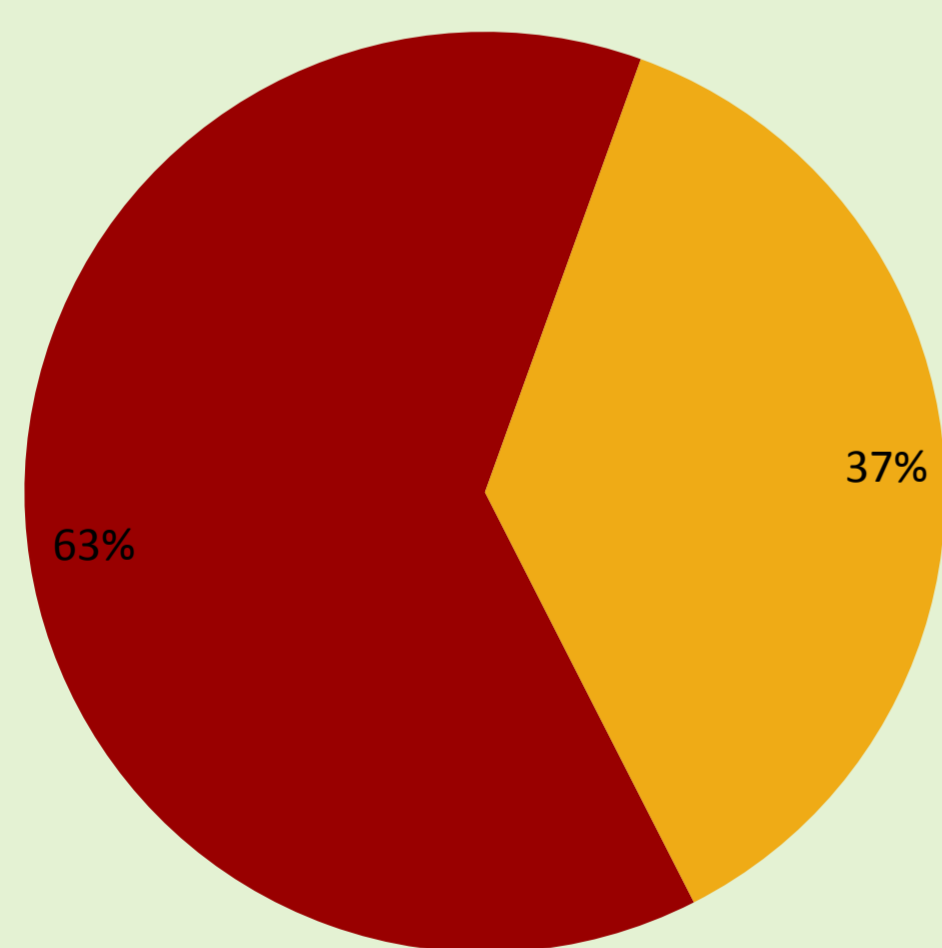

Annually, around 400 children under 20 die, 62% as a consequence of predictable diseases

Results

In the study period, 338 patients with limiting and/or life-threatening diseases were treated representing approximately 37% of the patients who would require specialized care

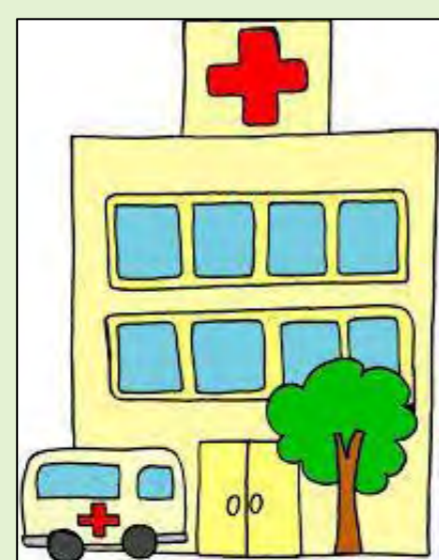

■ Non treated patients ■ Treated patients

63/338 patients died with the support of specialized PC teams. 25% of the theoretical estimated in Catalonia.

28 deaths at home

35 deaths at the hospital

Conclusions

Thanks to the design of a specialized network of professionals

- ✓ Improving in the care coverage of complex patients with palliative needs in Catalonia
- ✓ Improving the quality of life of patients and their families

The final goal of the network continues to achieve a coordinated response to all patients living in the territory
