This app monitors and records the pain experienced by a child. It is recommended that a parent or carer helps a child in recording their information. The app is a tool to assist in monitoring and recording a child’s pain levels but is not meant to replace a full and thorough assessment when this is needed. All screens can be bypassed if not relevant to the child being assessed.

Please Note:
Only select one pain site at a time. Once the process is complete the app will ask if the child is experiencing pain in any additional site.

Also please ensure the child understands on which side of the body the pain is being experienced and chooses the correct side on the app. The child may need some assistance in this step as this can be confusing to younger children.

Are you willing to help.....

- Ask a teenage or young adult patient/parent of a LL or LT child to test the app for 4 – 6 weeks and complete a simple questionnaire on Survey Monkey?
- Translate the app into another language?
- Please fill in your details on the form, or contact me directly at:

  sue.boucher@icpcn.org
Thank you for your attention
